

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A device for releasing a volatile substance comprising:
 - a housing having an interior region, an outer surface, and an opening in at least one end;
 - a volatile substance contained within the interior region of the housing;
 - means for orienting the device such that gravity forces the volatile substance toward the opening;
 - means for controllably releasing the volatile substance from the housing and onto an emanator material positioned a predetermined distance below the housing such that the emanator material is physically separated from the housing, the emanator material positioned proximate the housing;
 - means for heating at least one of the volatile substance ~~located within the housing~~ or air located within the housing, or the emanator material, wherein the heating means is associated with at least a portion of the emanator material; and
 - means for increasing the evaporation of the released volatile substance from the emanator material, wherein the evaporation increasing means comprises means for increasing circulation of air proximate at least one of the opening in the housing and the emanator material, wherein the circulation increasing means comprises a fan.
- 2-27. (Cancelled).
28. (Currently amended) A device for releasing a volatile substance comprising:
 - a housing having an interior region, an outer surface, and an opening in at least one end;
 - a volatile substance contained within the interior region of the housing;

- means for orienting the device such that gravity forces the volatile substance toward the opening;
- means for controllably releasing the volatile substance from the housing[[,]] and onto an emanator material positioned a predetermined distance below the housing such that the emanator material is physically separated from the housing, the emanator material positioned directly below the housing; and
- means for heating ~~at least one of the volatile substance within the interior region of the housing and air located within the housing~~ the emanator material, positioned directly below the housing and the emanator material
- means for increasing the evaporation of the released volatile substance from the emanator material, wherein the evaporation increasing means comprises a fan for increasing circulation of air proximate the emanator material

29-33 (Cancelled).

34. (New) The device according to Claim 1, wherein the means for controllably releasing the volatile substance from the housing and onto the emanator material comprises a gas generating cell.

35. (New) The device according to Claim 1, wherein the means for controllably releasing the volatile substance from the housing and onto the emanator material comprises a gas generating cell.

36. (New) The device according to Claim 1, wherein the emanator is a non-porous plate.

37. (New) The device according to Claim 1, wherein the emanator is a non-porous plate.
